### ENHANCING NATURE PRECISION

It was the year 1970 when the Longoni brand introduced the first multi-layer shaft changing completely the carom world; today, after almost 40 years, thanks to the new adopted technologies, that big project comes alive again thanks to the **S2** shaft.

The Canadian maple nowadays is the best essence for the carom game, thanks to its characteristics of density, flexibility and colour. However nature has not been modelled for the billiard game: a classical shaft is strongly anisotropic, therefore with different characteristics depending on the position in which it is used.

The **S2** shaft, composed of 10 equal parts, has been studied to compensate these differences and to give the feeling of a soft, precise and stable game. Each sector is carefully selected according to many factors such as flexibility, high density and conformity, in order to get again the shaft perfect for your game.

During the past few decades of research many tests have been carried out on this technology in order to create a product that could meet the different needs of professional players.

Its most appreciated characteristic is for sure the reduced deflection, which is an important factor to consider when you want to upgrade your playing level.

Moreover the player can devote itself completely to the game without thinking to the shaft anymore, sure to have a product in his hands, which will help him even in the most complicated shots

**S2** shaft is available in 3 lengths for all games: libre, cadre and 3 cushions.
