# S7

RAL9005 M/ Gold

S series – unique design tables, created on base of central console. Constructional features analogous to Decotech model. Exterior parts are manufactured using 3D technologies from thermoplastic similar like in car industry. Table and balls color choice give you great opportunity to create table, which perfectly fits with interior colors or make some contrast to them. Massive and heavy exceptional shape rails ensure perfect ball rebound. Rails top are made from very hard material.

 **Bilijardai**

Dining top S7, specially created for this model, perfectly meets geometric table shape. You can choose either 10mm thickness painted dining top or 6mm thickness shatterproof clear, frosted or with colour decors glass top.

For this models are used soft PVC pocket liners, which ensure great and calm acceptance of any ball. Depth of middle pockets are the same as corner ones, what cause ideal acceptance as in professional tables for sport. Elastic nets which are not visible as are smartly hidden underneath corpus finishing.

Main colors

You can match your table colouring with your vehicle since for 3D parts colouring we use car paint.

For most popular pool game 8-ball we must have two different groups of 7 balls each + cue ball and eight ball. We suggest you to choose the color combination that fits your billiard and interior: 7 balls of one color, 7 balls of another color and two more balls of different colors.

Antracite

In Search of Perfection we finally found one! Decotech is a functional design that flirts with the future interiors. Decotech will deconstruct your past perception of massive and old-school billiard tables and will bring you into the future. Don't be deceived by the light dining table construction since underneath it hides billiard table fulfilling highest game standards. Ball collecting system makes the process of the game smooth and uninterrupted.

Now literally anyone can have the pleasure of the game since the Decotech has been specially designed for a person who uses a wheelchair as well. Nevertheless, its universal design allows to enrich any modern interior or quite contrary to bring contemporary feeling into more classical space. Table top holder, specially designed to match the table, allows you to flawlessly enjoy the game any time you want. Forget about the old-fashioned cue and ball holdings since now you can store your cues under the table top and put the balls under the table.

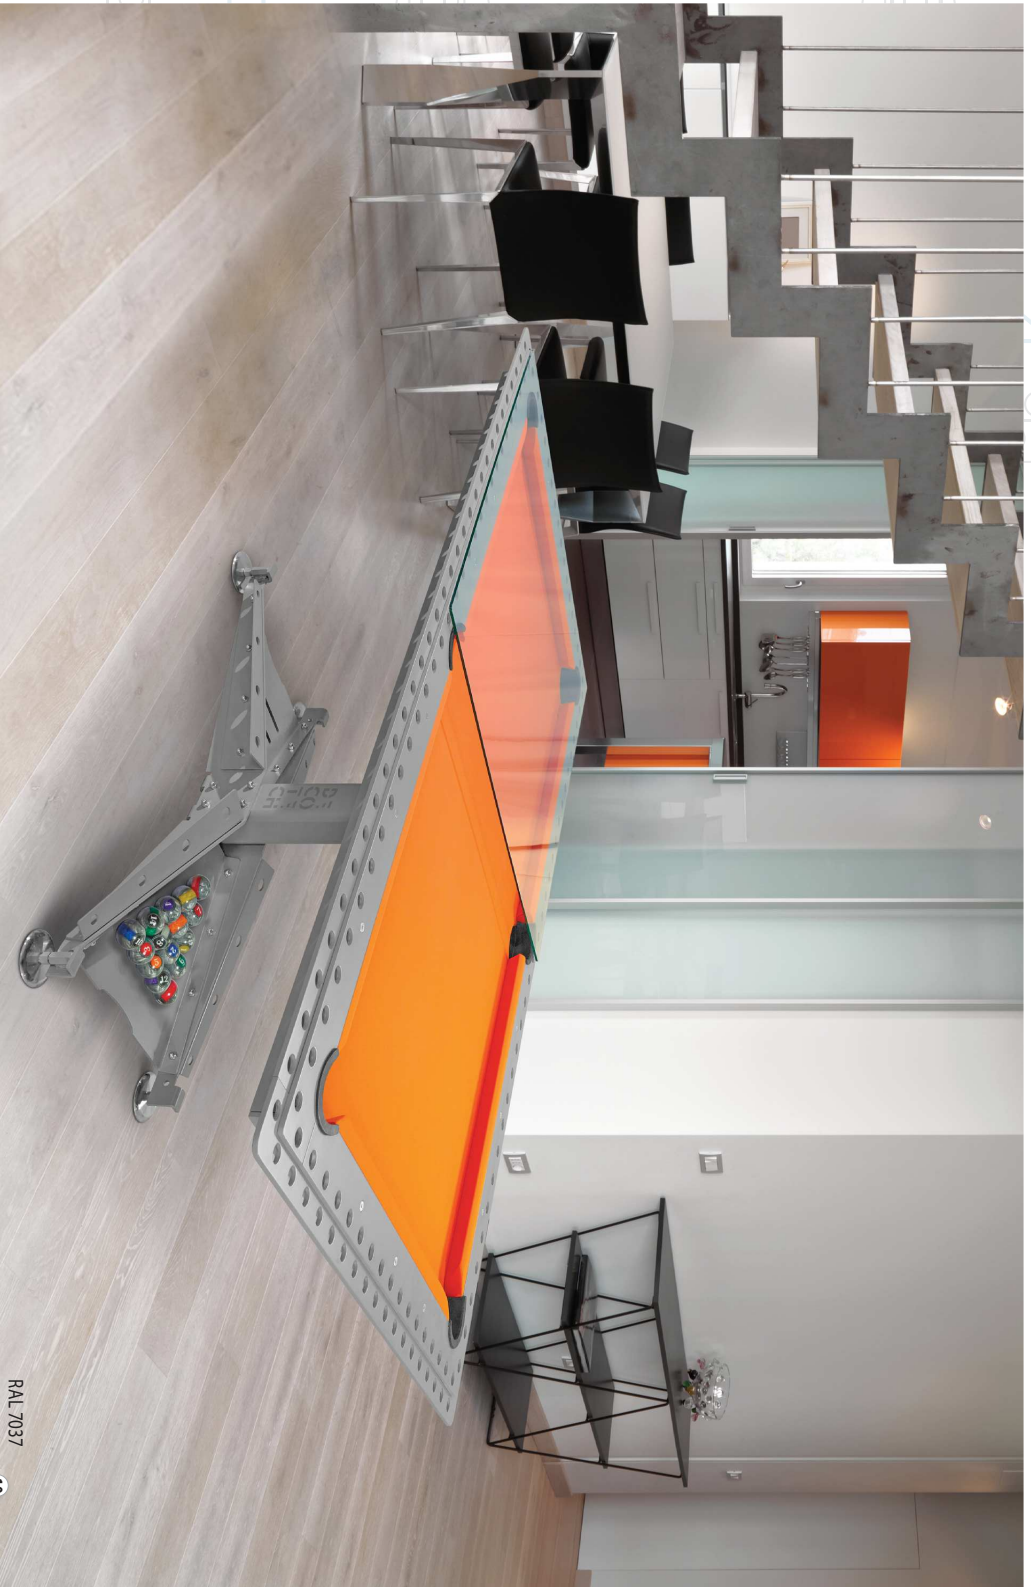

For the times that you do not feel like playing billiard, we constructed a table tennis net, which fits perfectly your dining table's top. The drawer at the end of the table is for you to store the net, rackets and balls.

Billiard table Decotech designed by Lithuanian designer Irtas Žmuida.

Golden

Rust

Deconstructivism – a movement, which appeared and spread in West Europe and United States at the beginning of ninth decade. Its founder Jacques Derrida – famous 20th century French philosopher and deconstructivism theory pioneer. Deconstruct generally means break, take it to pieces and construct it from scratches once again. The idea behind it suggests that we are able to see the world from a different angle, we just have to get rid of stereotypes and presumptions. This is why one of the golden postmodernism canons encourages us to accept the fact that all unusual, unique and not familiar to our eyes solutions have a right to appear in any sphere of our life (including fashion).
